Bug ID: BUG-001

Title: Login fails with valid credentials when email is entered in uppercase.

Environment :
Application: Practice Software Testing (Toolshop Demo)
URL: https://practicesoftwaretesting.com
Browser: Opera One (sürüm: 135.0.5973.66), Güncelleştirme Akışı: Stable, System: Windows 11 64-bit, Chromium sürümü:151.0.7922.176
Build/Version: v2.4 | Built 2026-08-22 | Angular 20.0.5

Preconditions: A registered user account must exist in the system.

Steps to Reproduce:
1. Navigate to the Login page.
2. Enter the registered email address in uppercase (e.g., TEST001LOGIN@GMAIL.COM).
3. Enter the correct password.
4. Click the "Giriş Yap" button.
5. Observe the result.

Expected Result: The user should be authenticated and logged in successfully, since email addresses are typically case-insensitive.

Actual Result: The login attempt was rejected with an "Invalid email or password" error, even though the credentials were correct except for the letter casing.

Severity: Major

Priority: High
