Bug ID: BUG-005

Title: Cart grand total does not update when the product quantity is changed directly in the quantity field.

Environment :

Application: Practice Software Testing (Toolshop Demo)
URL: https://practicesoftwaretesting.com
Page: Cart page
Browser: Opera browser

Preconditions: A product (Pliers, $12.01) is already in the cart with quantity 1.

Steps to Reproduce:

1. Open the cart page with the product (Pliers, $12.01) already in it at quantity 1.
2. Click into the quantity field and change the value to 5.
3. Observe the line total for the product.
4. Click outside the quantity field to remove focus.
5. Observe the grand total at the bottom of the cart.

Expected Result: Changing the quantity in the input field should recalculate both the line total and the grand total to reflect the new quantity.

Actual Result: The line total updated correctly to $60.05 (5 × $12.01), but the grand total at the bottom remained stale at $24.02 (the previous total for quantity 2), even after clicking outside the input field to remove focus.

Severity: Major

Priority: High

Evidence:
