Bug ID: BUG-006

Title: No validation message is shown when an invalid cart quantity (0 or negative) is automatically corrected.

Environment :

Application: Practice Software Testing (Toolshop Demo)
URL: https://practicesoftwaretesting.com
Page: Cart page
Browser: Opera browser

Preconditions: A product is in the cart with quantity 1.

Steps to Reproduce:

1. Open the cart page.
2. Clear the quantity field and enter 0.
3. Click outside the field to remove focus.
4. Observe whether any message or notification is shown.

Expected Result: When the system automatically corrects an invalid quantity (such as 0) back to the minimum valid value, it should inform the user with a visible message (e.g. "Minimum quantity is 1") explaining why the value changed.

Actual Result: In both cases the quantity field silently reset back to 1 with no validation message, toast, or any other explanation shown to the user. When quantity 0 was entered (TC-CART-012), the line total briefly showed $0.00 before correcting. When quantity -1 was entered (TC-CART-013), the line total briefly showed a negative currency value ($-11.48) before correcting, and the grand total remained stale during that moment.

Severity: Low (Usability/Cosmetic)

Priority: Low

Evidence:
