Bug ID: BUG-007

Title: Expected 401 session-check request on page load is logged as a console error instead of being handled silently.

Environment :

Application: Practice Software Testing (Toolshop Demo)

URL: https://practicesoftwaretesting.com

Page: Home page (and likely all pages, needs further verification)

Browser: Chrome

Preconditions: User is logged out.

Steps to Reproduce:

1. Log out (or use an incognito/clean session).
2. Open Chrome DevTools, go to the Console tab.
3. Load/refresh the home page.
4. Observe the console.

Expected Result: Since checking whether a user is logged in is a routine, expected operation, a 401 response from this check should not be logged as a red console error — it should be handled silently or logged at a lower severity (e.g. info/debug).

Actual Result: Two GET requests to /users/me returned 401 (Unauthorized), and the console displayed 3 error entries total, including an uncaught {message: "Unauthorized"} error, even though this is expected behavior for a logged-out session.

Severity: Minor (Code Quality)

Priority: Low

Evidence:
