Bug ID: BUG-008

Title: Google Analytics 4 is initialized with deprecated parameters, logging a console warning on every page load.

Environment :

Application: Practice Software Testing (Toolshop Demo)
URL: https://practicesoftwaretesting.com
Page: Product detail page (likely all pages, needs further verification)
Browser: Chrome

Preconditions: None.

Steps to Reproduce:

1. Open Chrome DevTools, go to the Console tab.
2. Open any product detail page.
3. Observe the console.

Expected Result: Third-party library integrations (such as Google Analytics 4) should be initialized using current, non-deprecated API parameters, producing no warnings in the console.

Actual Result: The console displayed a yellow warning: "using deprecated parameters for the initialization function; pass a single object instead", originating from feature_collector.js:23 (Google Analytics 4 initialization code).

Severity: Trivial (Code Quality)

Priority: Low

Evidence:
