Bug ID: BUG-009

Title: Uncaught TypeError ("Cannot read properties of null (reading 'cart_items')") is repeatedly thrown in the console when the cart quantity is updated.

Environment :

Application: Practice Software Testing (Toolshop Demo)
URL: https://practicesoftwaretesting.com/checkout
Page: Cart / Checkout page
Browser: Chrome

Preconditions: User has at least one product in the cart.

Steps to Reproduce:

1. Log in and add at least one product to the cart.
2. Open Chrome DevTools, go to the Console tab, clear it.
3. Open the cart page.
4. Increase the quantity of a product in the cart (e.g. from 1 to 3) using the quantity input.
5. Observe the console during and after the quantity update.

Expected Result: Updating the quantity of a cart item should not throw any uncaught JavaScript exceptions in the console. The underlying component should null-check any object it reads before accessing its properties during re-render.

Actual Result: Each time the cart quantity was changed, the console repeatedly logged "ERROR TypeError: Cannot read properties of null (reading 'cart_items')", with a stack trace through template -> Vm -> HC -> rd -> Xm -> GC -> ev (chunk-4MSJTYQJ.js / chunk-XPTZBBTO.js). The number of repeated error entries increased together with the quantity change (13 errors at quantity 1, 16 errors at quantity 3), indicating the error fires once per re-render cycle. The cart total itself still recalculated correctly ($42.45 for 3 x $14.15), so no incorrect price or broken UI was observed, but the component is reading a property from a null object during the update cycle.

Severity: Major (Code Quality / Stability Risk)

Priority: Medium
